

E-commerce website for community car-rental service

1. Purpose of this document

1.1 What is the definition of done?

Definition of done is acceptance criteria across all User Stories. Definition of done is a criterion to decide the completion of a project with meeting the requirement of the user.

1.2 Importance of this document.

- The Definition of Done ensures everyone on the Team knows exactly what is expected of everything the Team delivers. It ensures transparency and quality fit for the purpose of the product and organization.
- Definition of Done is also a good reporting tool for team members as it specifies that 'the feature is done'.

2. Definition of done

- There are three types of definition of done.
 - Definition of Done for a feature (user story or product backlog item)
 - Definition of Done for a sprint
 - Definition of Done for a release
- For this project 'Community Car Rental Service' we define the 'Definition of Done for feature'
- And a checklist for 'Feature is done' is given below.

1	Design Reviewed
2	Coding is done <ul style="list-style-type: none">• Refactoring of code• Code in a standard format• Code is checked• Code is inspected
3	Testing is done
4	No defects

3. Definition of Done checklist for all system feature

	Feature	Design Reviewed	Coding is done	Testing is done (Unit testing)	No defects
